

effect of sample size on the posterior

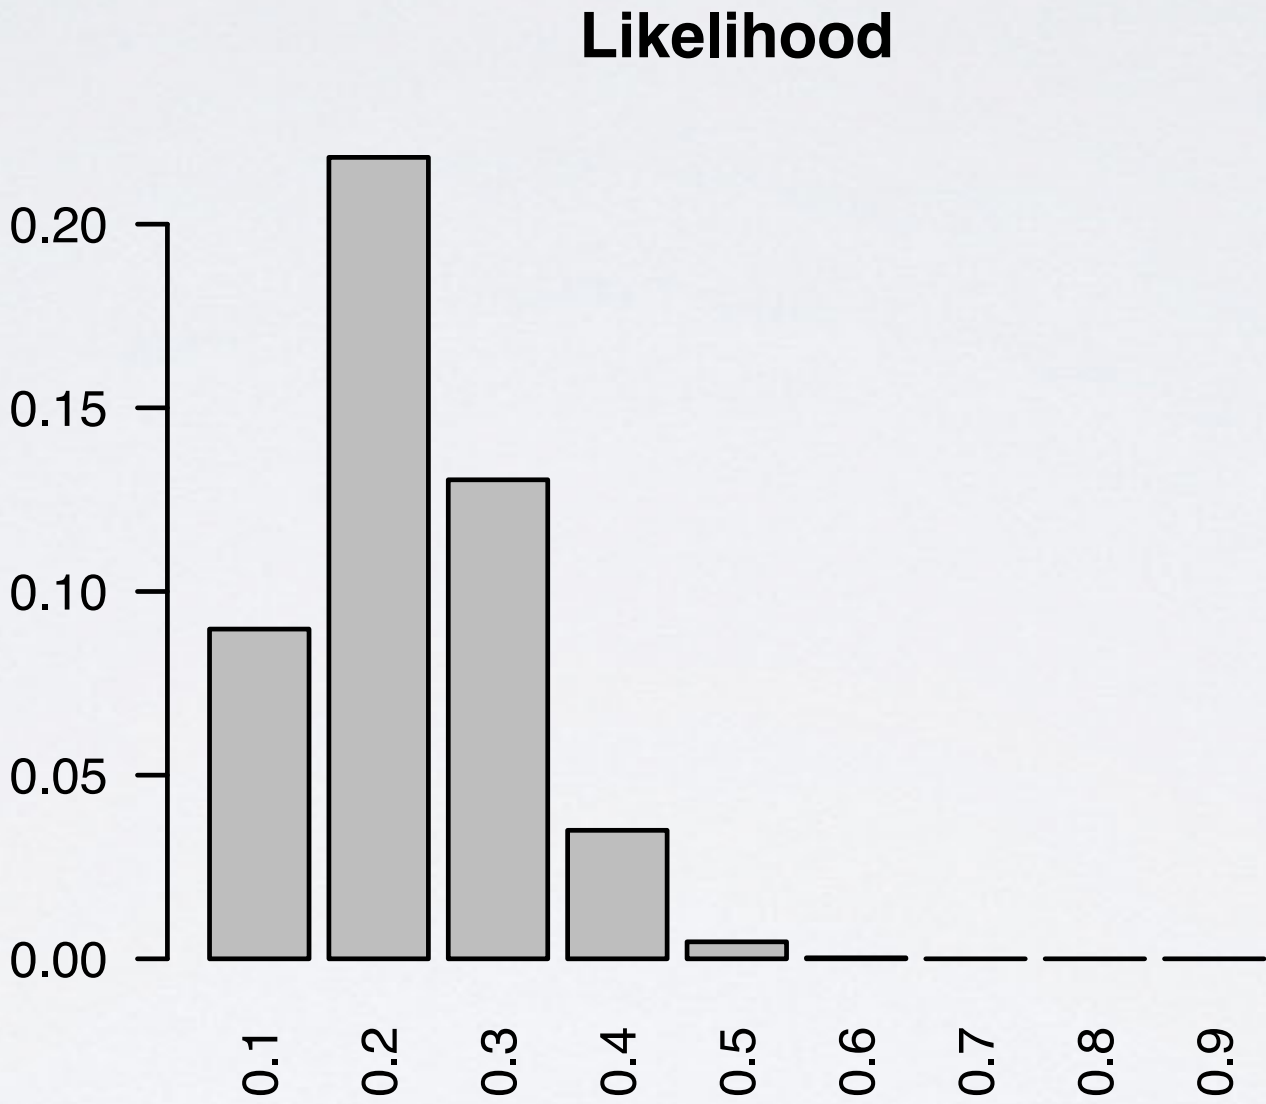

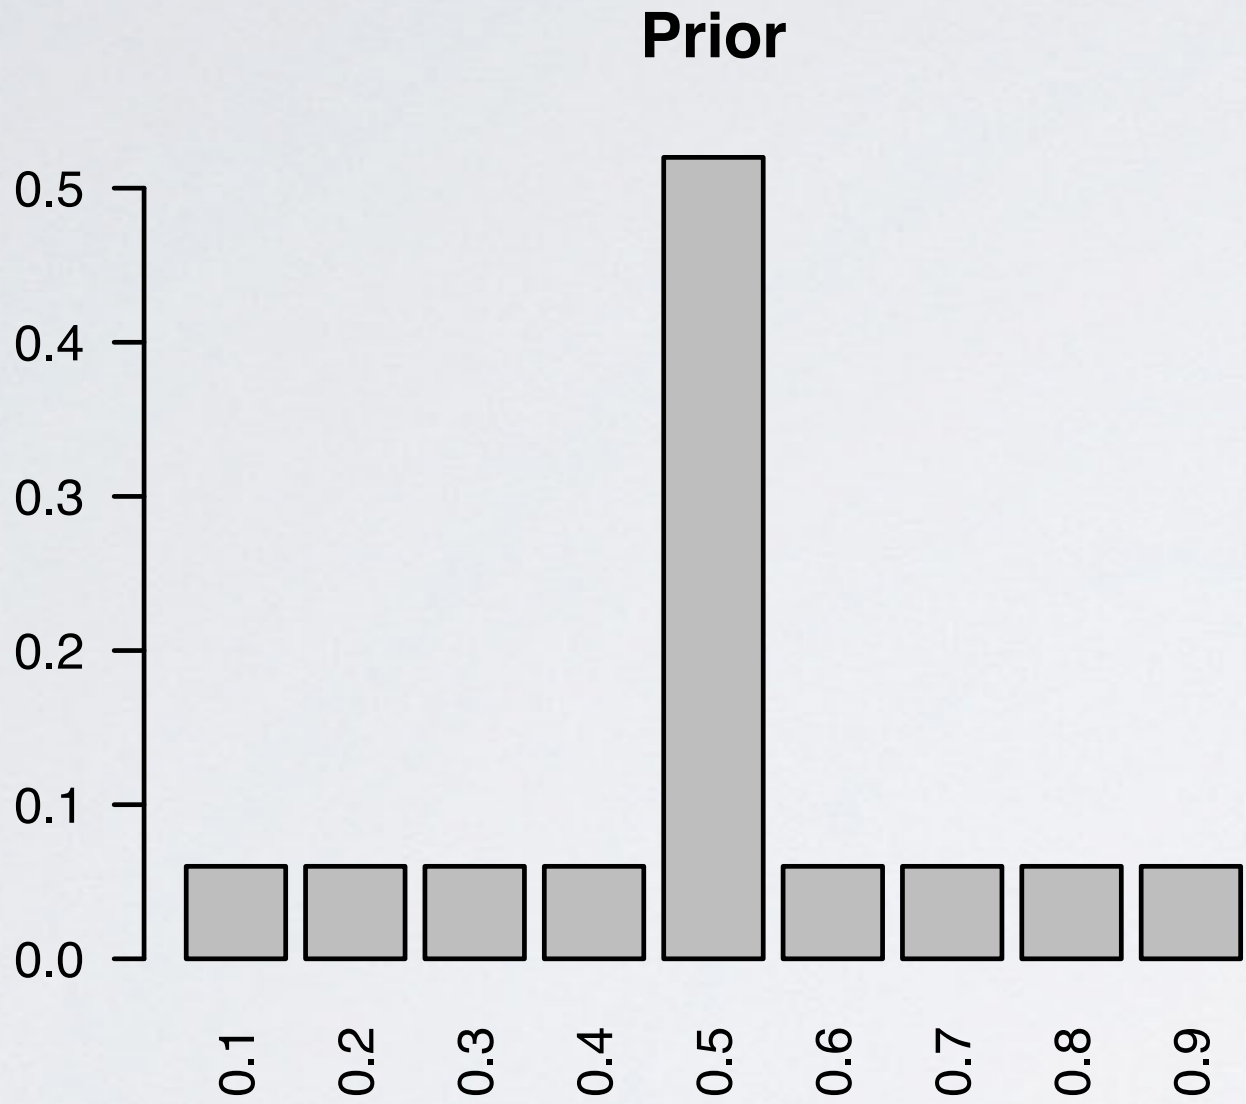

original results

$$n = 20, k = 4$$

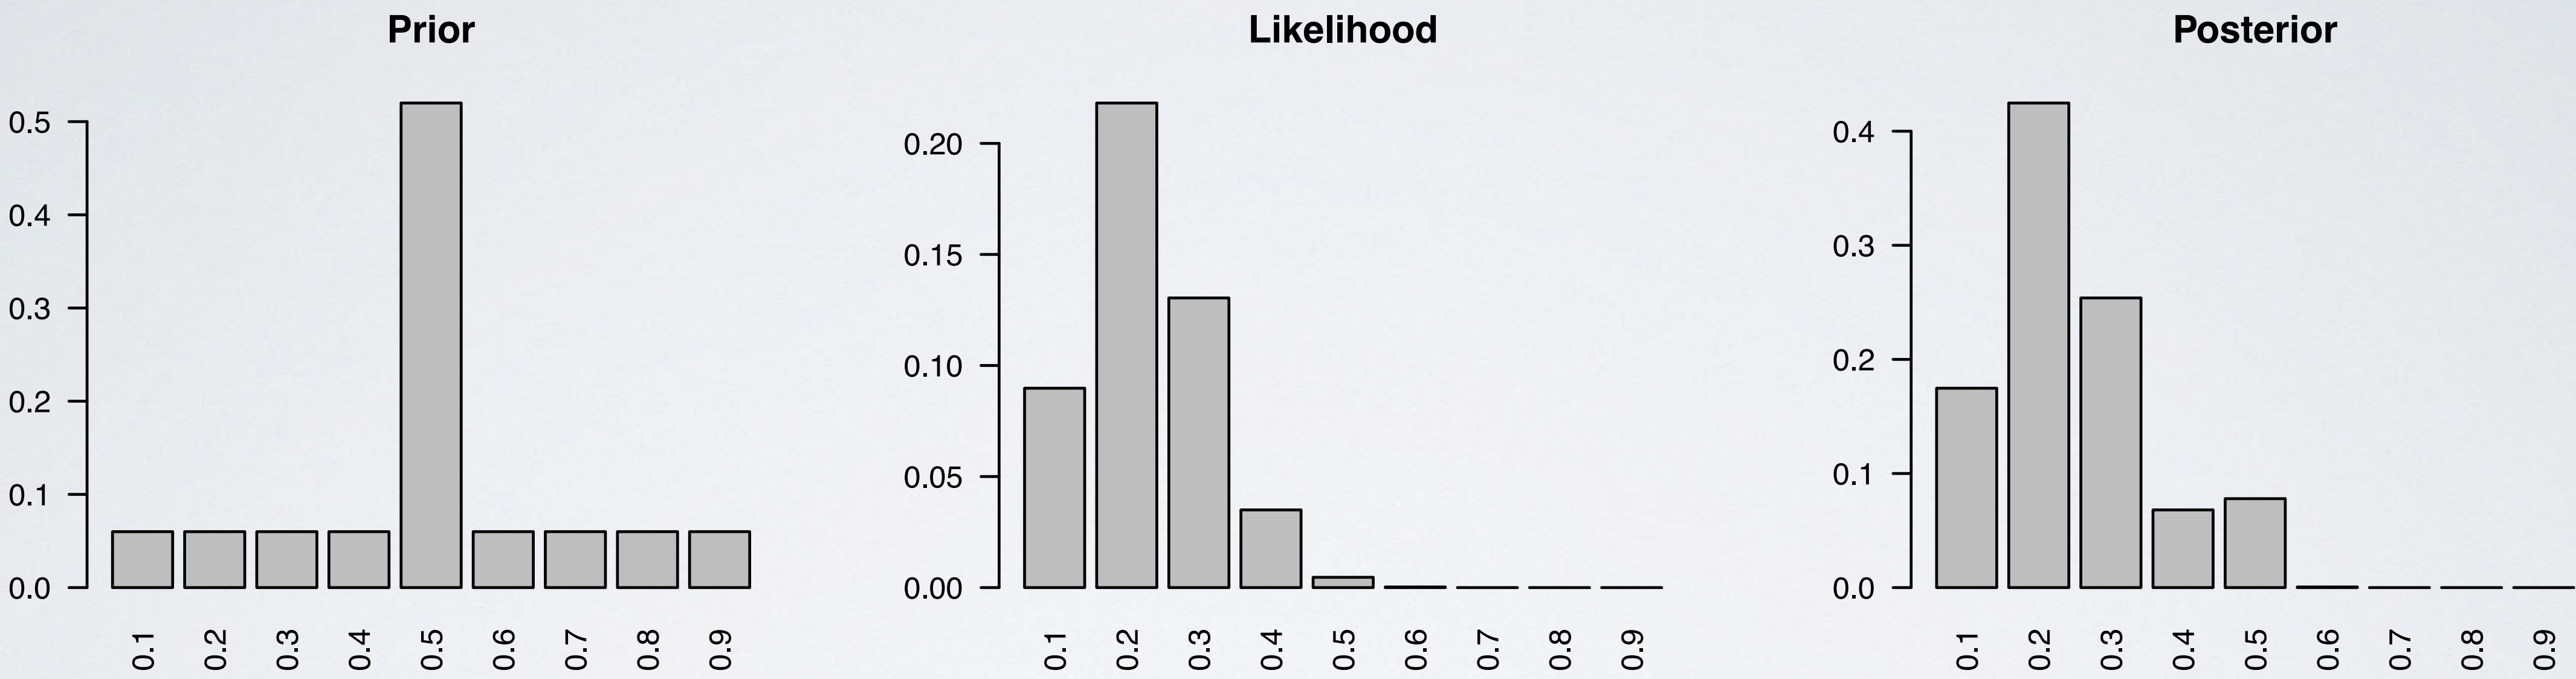

original results

$n = 20, k = 4$

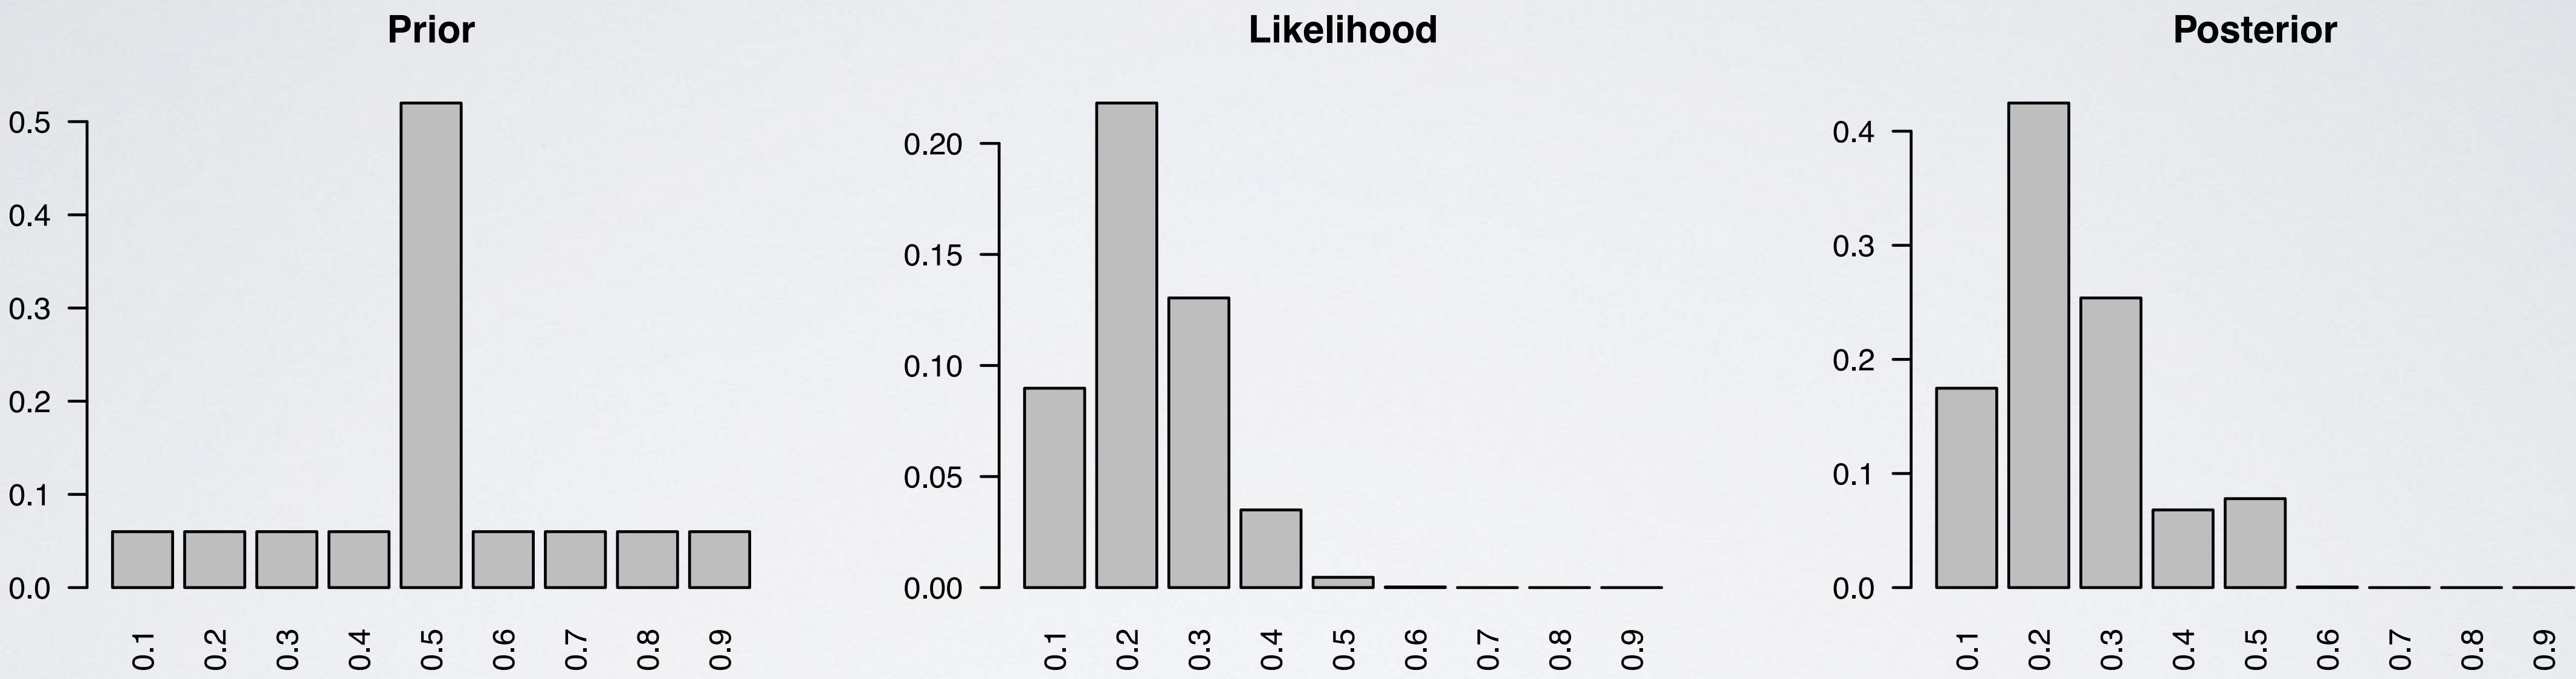

original results

$n = 20, k = 4$

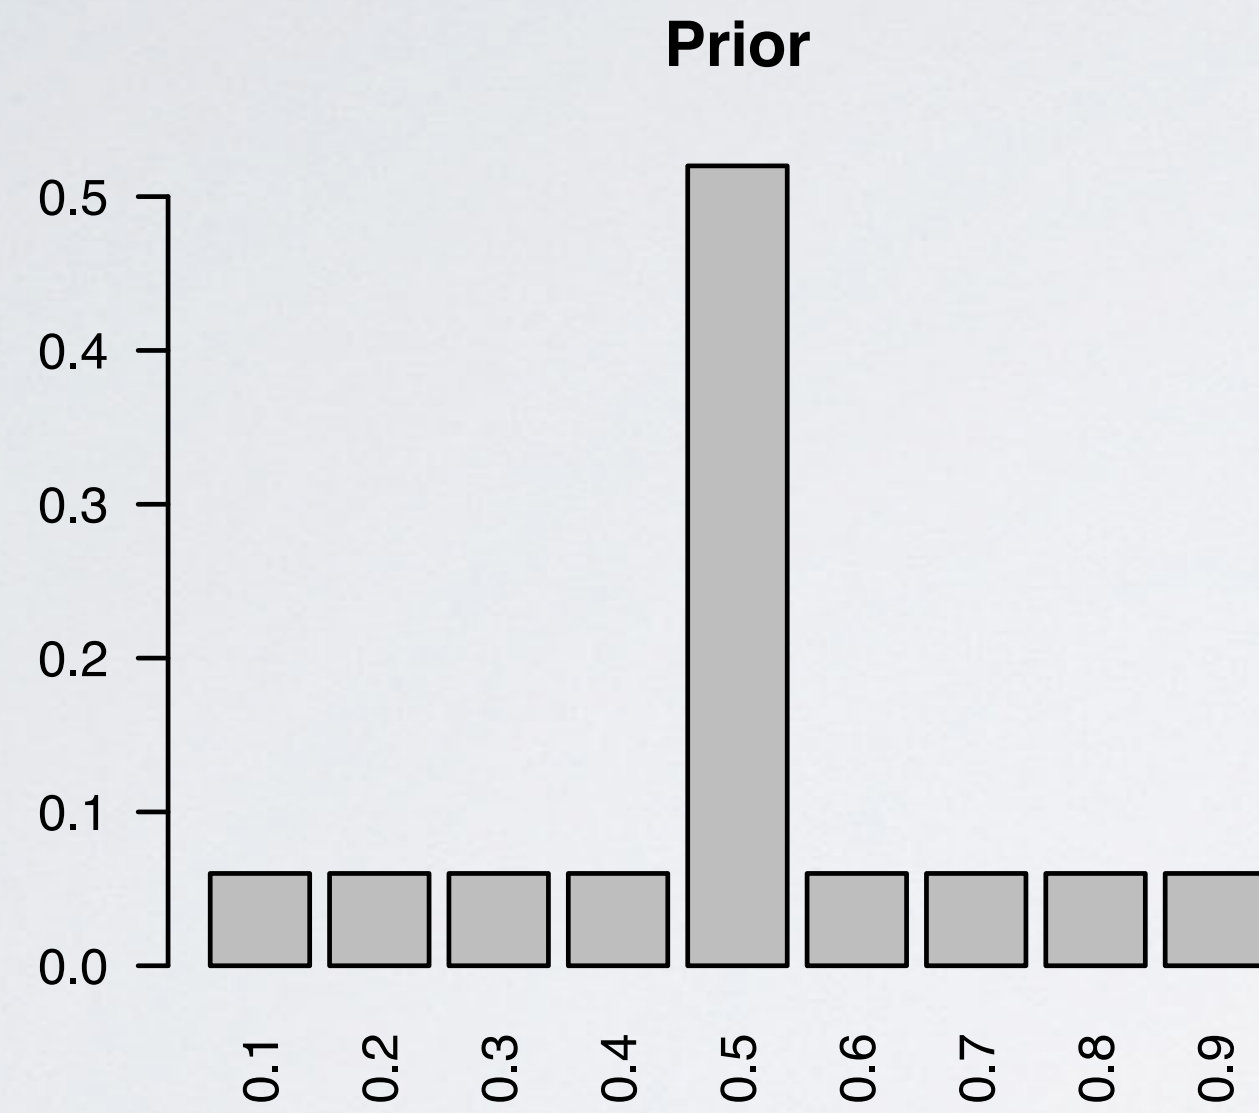

original results

$n = 20, k = 4$

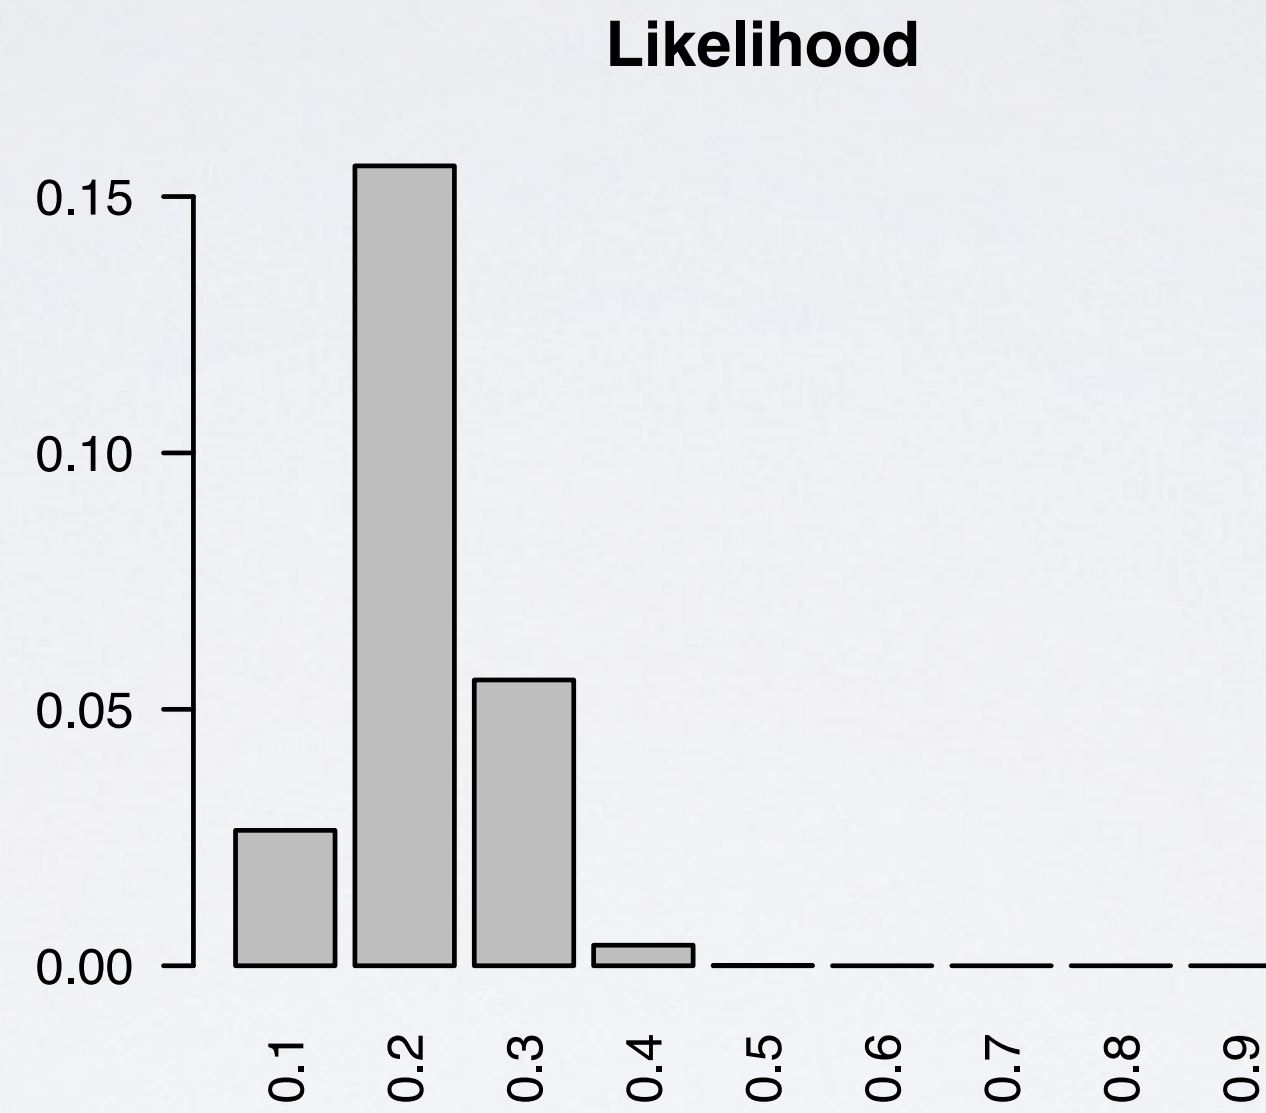

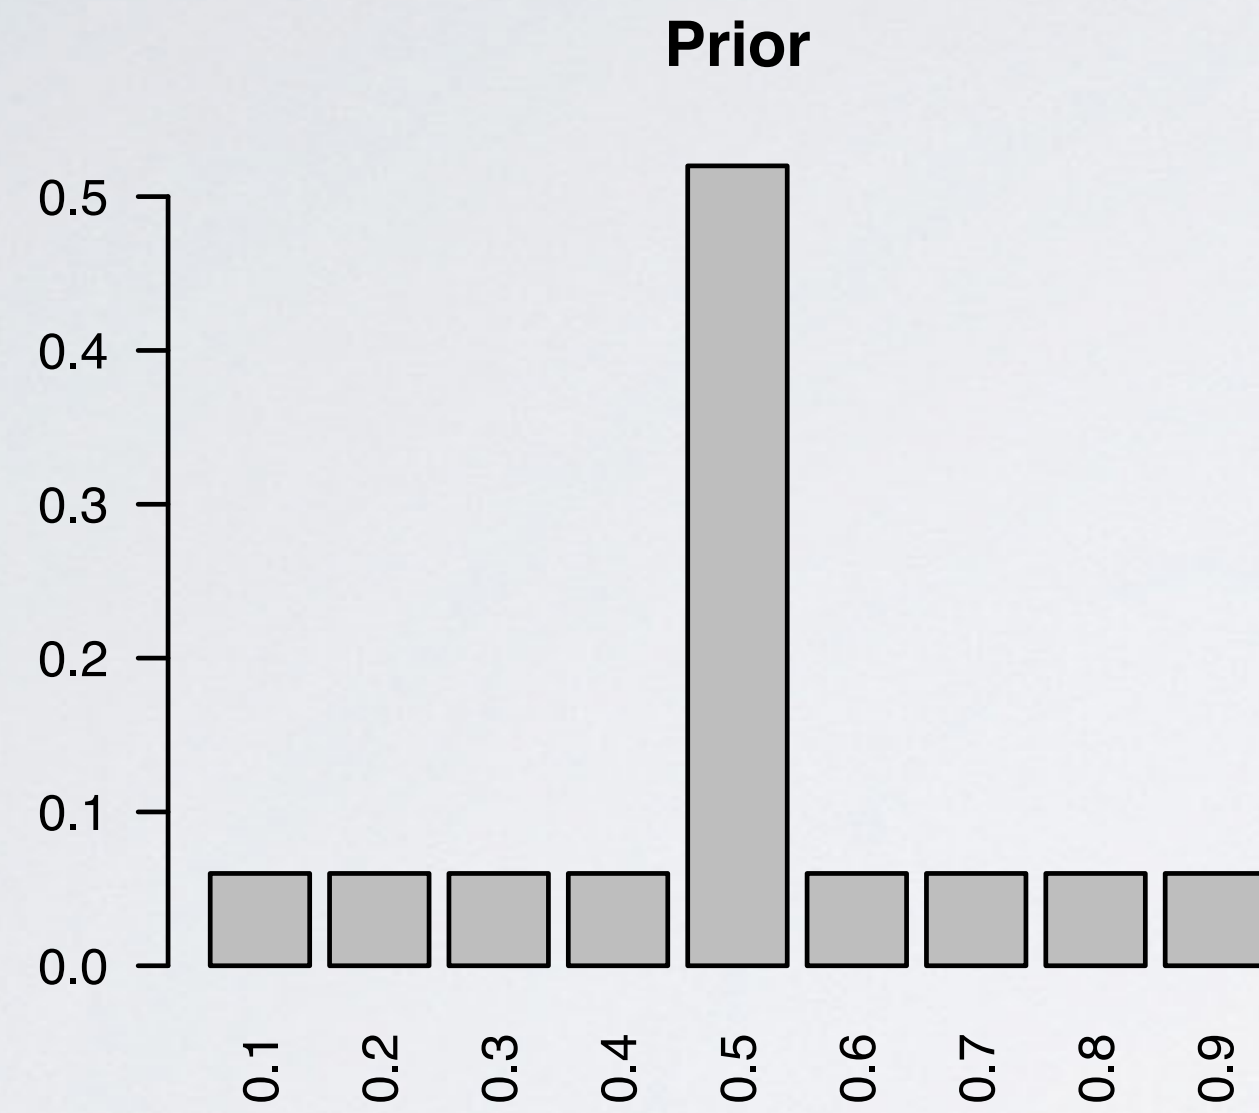

what if we had more data

$$n = 40, k = 8$$

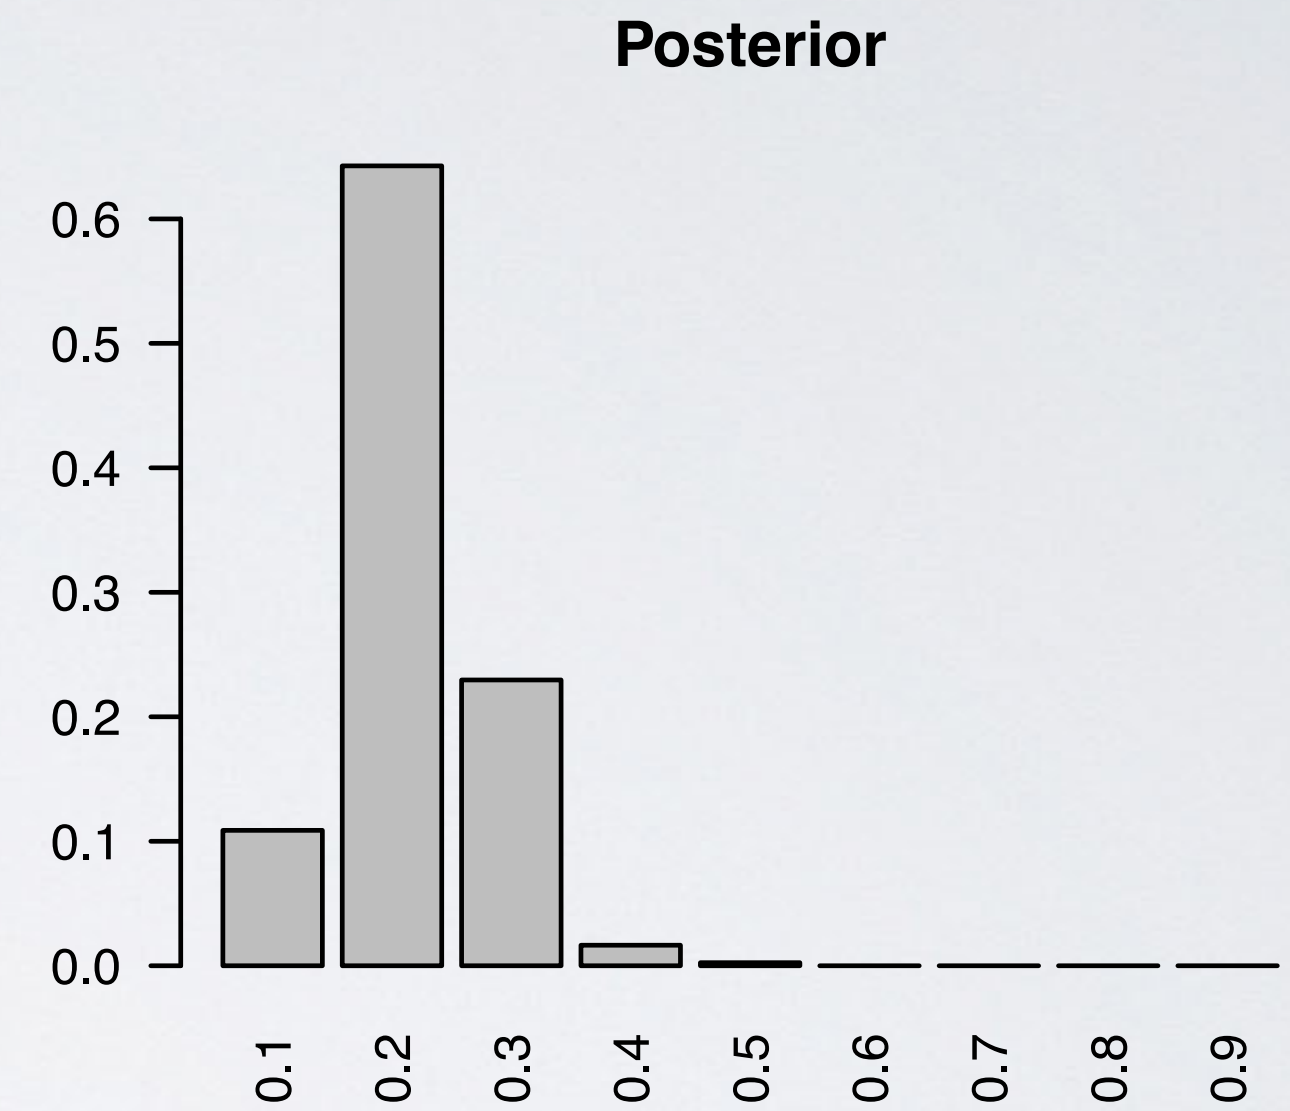

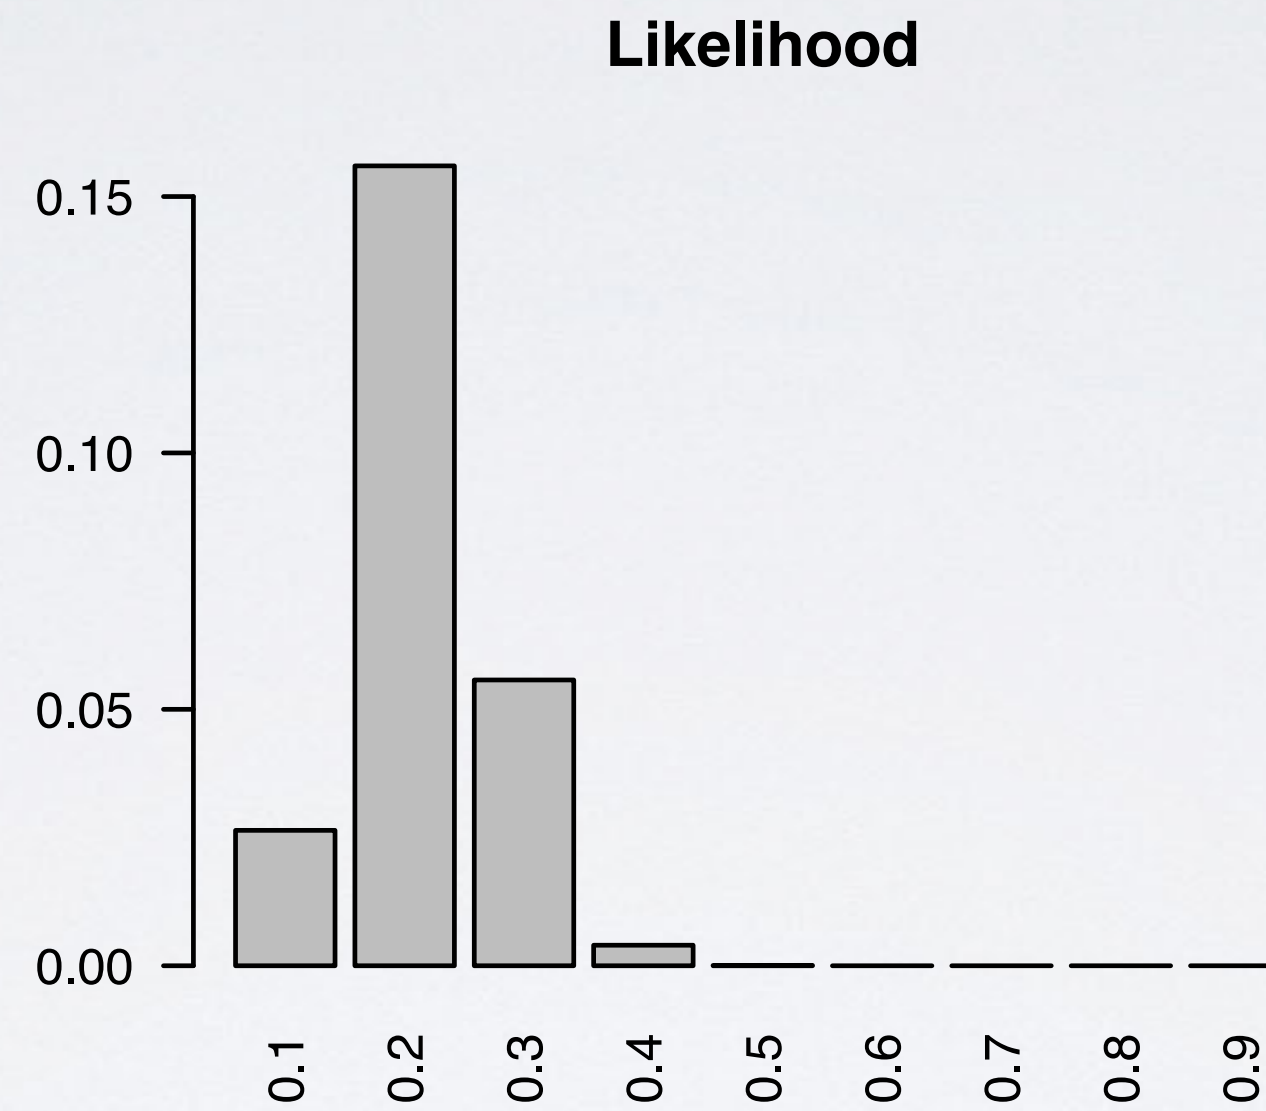

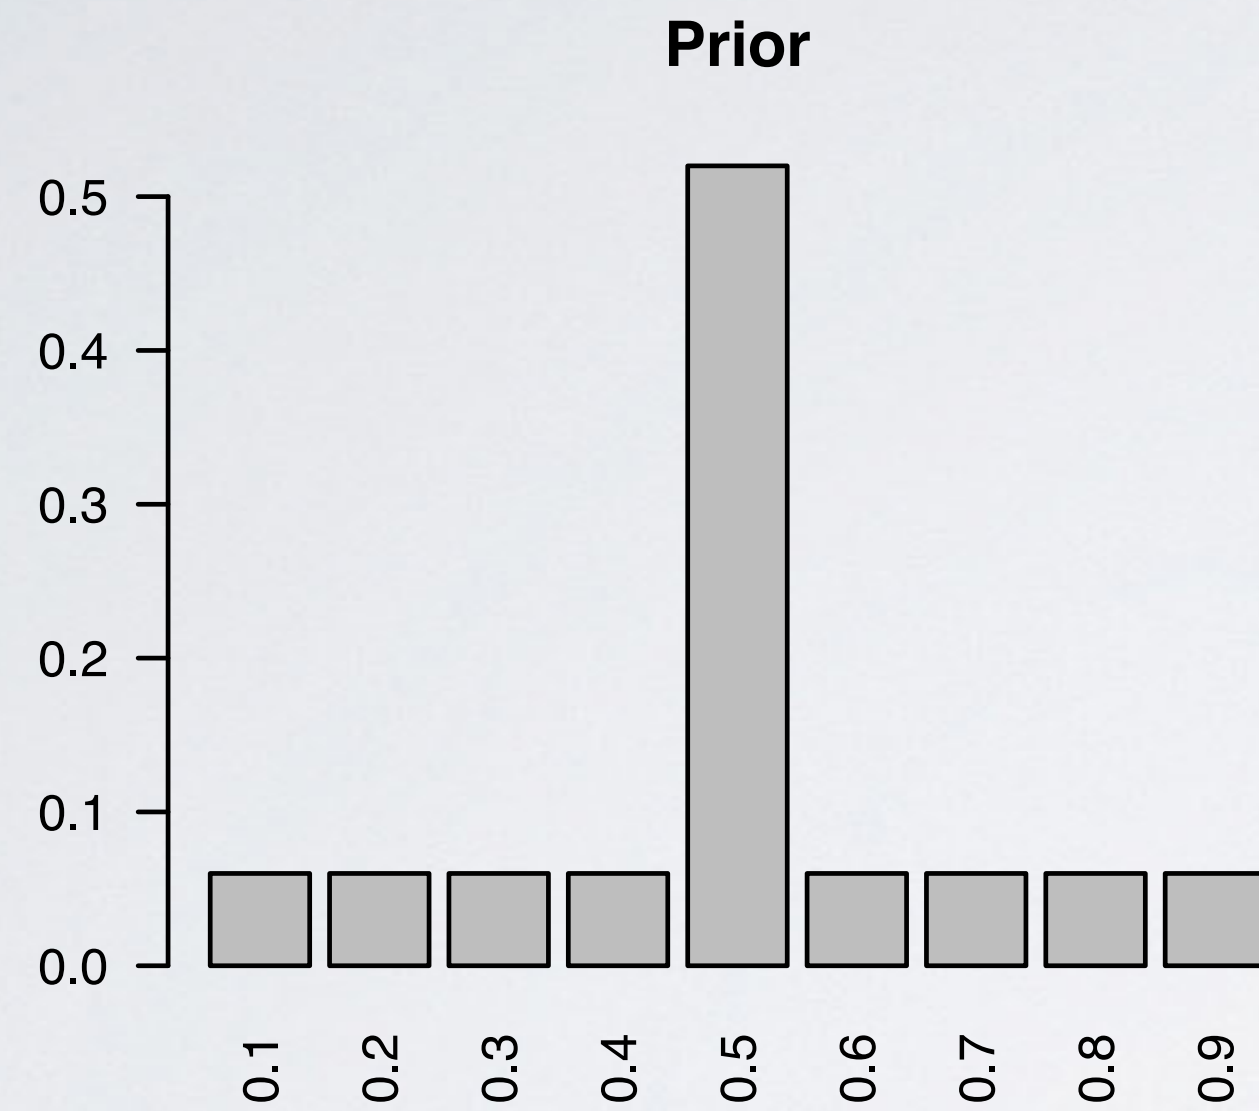

what if we had more data

$$n = 40, k = 8$$

what if we had more data

$$n = 40, k = 8$$

what if we had *even* more data

$$n = 200, k = 40$$
